

The background of the image is a composite of two aerial photographs. The top-left portion shows a close-up of a waste management yard with numerous blue and orange shipping containers, several white pickup trucks, and a large white semi-truck. The bottom-right portion shows a wider view of a large industrial facility, likely a waste-to-energy plant, with multiple large buildings, parking lots filled with vehicles, and a road curving through the site. The entire image has a blue color overlay.

CONTAINERIZED WASTE

SECURE

CONTAINERIZED WASTE

RELIABLE CONTAINMENT. BUILT FOR YOUR OPERATIONS.

SECURE delivers one of the largest and most flexible bin programs in Canada:

13,000

SMALL CONTAINERS

1,200+

ROLL-OFF BINS

Our bins are built for:

- Hazardous and non-hazardous waste
- NORM-contaminated materials
- Combustible/self-heating waste
- Contaminated soil, sludges and used oil
- Batteries, filters, catalysts and carbons
- Recyclables, construction debris and scrap metal

Customization options

Need something site-specific? SECURE offers tailored roll-off bin solutions including:

- Modified bin dimensions
- Hopper chute liners (dust suppression)
- Engineered heating blankets
- Chemical-resistant bin coatings
- Crank modifications to fit existing waste setups

OUR BINS ARE BIGGER

More room. Less hassle.

SECURE has the largest containerized hazardous waste bins available on the market at 2.7m³. Competitors offer 2.3m³ - making SECURE bins 30% bigger. Bigger bins means cost savings, lower total number of bin flips per year, lower overall cost per m³ for disposal and reduced number of trucking hours (in turn reducing environmental footprint).

CONTAINERIZED WASTE

SMALL BINS

Waste, Soil & Solids | 1.4 m³

For small volumes of contaminated soil, catalyst, activated carbons, solid sulphur and desiccants. The 1.4 m³ units are wide enough to accommodate loading with a skid steer bucket.

Aerosols | 1.2 m³

Designed for the safe collection of spent, expired, or damaged aerosol containers, including both hazardous and non-hazardous aerosols. Acceptable materials include spray paints, lubricants, cleaners, solvents, pesticides, and other pressurized aerosol products.

Waste Filters, Rags & Absorbents | 2.7 m³

Ideal for the containment of a wide range of filters, including but not limited to filter socks, amine, spin-on, and lube oil filters as well as contaminated rags and absorbent pads.

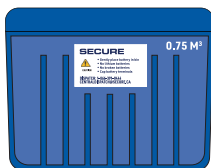

Self-Heating Filters | 2.7 m³

Specialty bins for spontaneously combustible materials / self-heating filters. The addition of a gasket on the metal bin reduces exposure to air when the lid is closed.

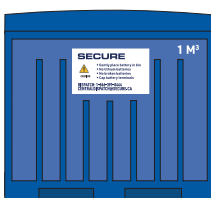

Waste Solids with NORM | 2.7 m³

For NORM contaminated filters, PPE and non-re-usable solid materials. Clearly labelled and coloured specifically (Green) to allow for the segregation of waste on your site.

Battery Bin | 0.75 m³

Ideal for lead acid batteries (vehicle or equipment) and other liquid electrolytes. For when you need safe containment of batteries. Pails can also be provided to further segregate small-sized batteries within the bin.

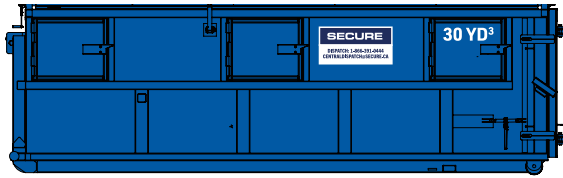

Battery Bin | 1.0 m³

Ideal for lead acid batteries (vehicle or equipment) and other liquid electrolytes. For when you need safe containment of batteries. Pails can also be provided to further segregate small-sized batteries within the bin.

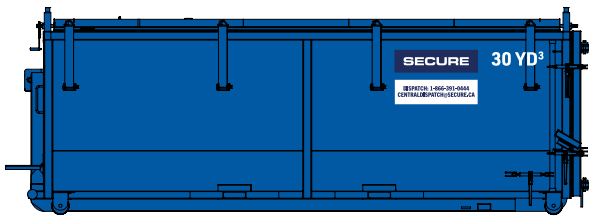

CONTAINERIZED WASTE

ROLL-OFFS

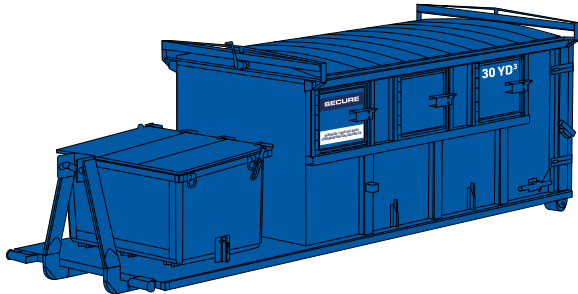

Bear-Proof Roll-Off Bin | 30 yd³

Ideal for camp waste, housing projects, parks, and other high-volume municipal waste generators. Multiple access points allow for easy loading either from ground or dock level.

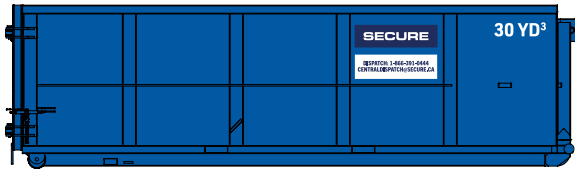

Sludge Bin | 30 yd³

Ideal for processed sludges, contaminated soils, desiccant and catalysts. Multiple access points allow for easy loading either from ground or dock level.

Combo Bin | 30 yd³

Specifically designed for multiple waste streams such as municipal solid waste, metal, wood recyclables, contaminated soil, filters, rags and liquid wastes such as glycol and used oil. Multiple access points and compartments for separating waste and reducing your footprint from five bins to one. Bulk containment bays have segregation gates to keep streams separate.

Open Top Roll-Off Bin | 30 yd³

Used for construction and demolition debris, municipal solid waste and other recyclable streams. Designed open top for handling large, bulky waste, rear-end gate can be opened for walk-in access if required.

Sludge Bin | 15 yd³

Ideal for processed sludges, contaminated soils, desiccant and catalysts. Multiple access points allow for easy loading either from ground or dock level.

NEED A PICK-UP?

Let us know when your waste containers are filling up, and we'll take care of it. Call **SECURE Dispatch!**
